(a) Network: site embedding, two stacked LSTM layers, dense output head

each hour: 13 standardised features (blue) + 4-value site embedding (purple), the same at every hour

Parameters: embedding 20, LSTM 1 21,248, LSTM 2 33,280, dense 2,080, output 792; total 57,420. Dropout p = 0.3 at the three red tags, kept active at prediction (MC Dropout).

(b) Site embedding: a one-hot code multiplied by a learned table

Values: network 1 of the reference run. Each network learns its own table; the individual numbers have no physical meaning, only how the sites' rows differ.
