
(a) Coverage and width: same forecasts, three interval widths
too narrow
CP = 0.63, MPIW = 123 W/m²
calibrated
CP = 0.95, MPIW = 353 W/m²
too wide
CP = 1.00, MPIW = 776 W/m²
ALLSKY_SFC_SW_DWN (W/m²)
Forecast element
(b) CRPS as an area
CRPS = 111 W/m²
|mean − y| = 181 W/m²
Cumulative probability
gap between F and step; CRPS = ∫(F − step)²
forecast CDF F (800 samples)
observation, y = 820 W/m²
Irradiance (W/m²)
(c) CWC penalty below CP = 0.95
CWC / PINW (log scale)
reference run, daylight
CP = 0.941 → × 2.5
Coverage probability CP
